University of Queensland |Master of Information Technology | Software Developer

---

Key Soft Skills

- Ability to learn quickly
- Time management
- Web design

Key Tech Skills

- JS
- React.js
- WordPress

Experience

MAY 2023 – Now

Software Developer / Speedcafe, Brisbane

Build a **high-traffic** WordPress website and integrate google ads into the website. **Customized WordPress plugin**. Change as required, add theme features and styles. Develop website **synchronization** program independently to keep the posts of two websites updated and consistent. Maintain website and integration with Google Ads.

SEPT 2021 – MAY 2023

Program Developer / Revolution Creative Group, Gold Coast

Developed many websites, took over developed projects and added features (e.g. added group deletion, sent email alerts). Added various website features using PHP, SQL, HTML, JS, JQUERY. Successfully developed linking sub-accounts through the main account. Platform integration (Stripe, Rewardful, Zapier).

MAY 2021 – JUNE 2021

Web Developer / BIZ FOCUSED, Brisbane

Websites and software application designing, Building, and maintaining. Using scripting and authoring languages, management tools, content creation tools. Performing Web website updates. Developing by using PHP/MYSQL, JS, JQUERY, WordPress and 3rd party API integration. WordPress theme and plugin development. Experience with CRM software's like leadspedia and Active Campaign. Develop the WordPress website locally and build a Linux Ubuntu 18 server environment on the virtual machine. Deploy the locally developed WordPress to the Linux of VirtualBox.

Project experience

Development of a **Logic System** front end using **React.JS, HTML, JS, CSS**. **Firebase** as the backend, users log-in using registered emails, and **regex** to standardize the password format. Available association with a **google account**, password retrieval through email.

Re-vent:

An application that helps people get together (like Eventbrite). Use **React.js, HTML, CSS, JS** to build the frontend, **semantic-up** as the UI library, **firebase** as the back end, **React-redux** to realize the communication between components. **npm** for function implementation, for example: use 'react-places-autocomplete' and 'google-map-react' to automatically fill in and display the party address, 'formik' to create reusable forms. Use **redux-devtools-extension** and **react dev tool** as **debug tools**. Other programming tools utilized were: **react-router-dom, cuid, Google API**, **GIT, jQuery, Node.JS** etc.

Education

2019 -2020

Master of IT / The University of Queensland

Advanced Database Systems (HD)：   • Distributed database design, query, transaction processing, data integration, data warehousing, data cleansing, management of spatial data, and data from large scale distributed devices. • Programming skills: **SQL, Java** and **Python.**

Interactive Technology(D): • Work in a multidisciplinary team to design, iterate and implement design projects.

SDLC was used in the entire process, and the webpage was developed according to the structure of MVC. • By using **JS,** users can synthesize their name with pictures, output the photo and download them. • Programming skills: **HTML, CSS, JS, QLD government API.**

Cloud Computing(D): • Design and develop applications by using **SaaS**. • Use the **GCP, docker, ubuntu** to implement SaaS to build scalable applications based on cloud computing architecture and tool

2016-2018

Bachelor of International Business / Griffith University
